

THE CLAIMS:

1. to 11. (Canceled).

12. (Previously Presented) An access system, comprising:

an operation device for outputting a control command of a direction of an image pickup device;

a receiving device for receiving an image picked up by the image pickup device which is controlled based on the control command of the direction of the image pickup device; and

a control device for extracting an address corresponding to a predetermined image included in the image received by said receiving device;

a monitoring device for monitoring whether the image received by said receiving device includes a predetermined image; and

an accessing device for accessing the address extracted by the control device corresponding to the predetermined image if the monitoring device monitors that the received image includes the predetermined image and a user performs an operation to designate the predetermined image.

13 (Canceled)

14. (Original) An access system according to Claim 12, wherein the

address includes a URL.

15. (Original) An access system according to Claim 12, wherein the address includes an email address.

16. to 26. (Canceled)

27. (Previously Presented) A method for accessing an address, comprising the steps of:

outputting a control command of a direction of an image pickup device;
receiving an image picked up by the image pickup device which is controlled based on the control command of the direction of the image pickup device;
monitoring whether the image received by the receiving step includes a predetermined image;
extracting an address corresponding to the predetermined image included in the image received in said receiving step; and
accessing the address extracted by the extracting step corresponding to the predetermined image if the monitoring step monitors that the received image includes the predetermined image and a user performs an operation to designate the predetermined image.

28. (Canceled)

29. (Original) An access method according to Claim 27, wherein the address includes a URL.

30. (Original) An access method according to Claim 27, wherein the address includes an email address.

31. to 41. (Canceled)

42. (Previously Presented) A computer-readable storage medium on which is stored a computer-executable program for executing a method of an access system for accessing an address, wherein the program comprises:

program code of an outputting step of outputting a control command of a direction of an image pickup device;

program code of a reception step of receiving an image picked up by the image pickup device which is controlled based on the control command of the direction of the image pickup device;

program code of a monitoring step of monitoring whether the image received by the reception step includes a predetermined image;

program code of an extracting step of extracting an address corresponding to the predetermined image included in the image received by the reception step; and

program code of an access step of accessing the address extracted in the extracting step corresponding to the predetermined image if the monitoring step monitors

that the received image includes the predetermined image and a user performs an operation to designate the predetermined image.

43. (Canceled)

44. (Previously Presented) A computer-readable storage medium according to Claim 42, wherein the address includes a URL.

45. (Previously Presented) A computer-readable storage medium according to Claim 42, wherein the address includes an email address.
